

CAMB601 Advanced Virology 2023 Syllabus

Each student will be responsible for one 1.5 hour individual presentation and one 1.5 hour joint presentation. Students will select two papers on a topic in Virology – one classic and one contemporary. As one example, a classic paper could be compared to a recent publication showing the progress within a field, or how the classic paper was foundational for the current work. If needed to fully appreciate the presented papers, background readings should be listed. Students should forward the chosen papers to Susan and Paul at least one week before the presentation for approval. To allow everyone enough time to read the papers, the papers should be emailed to the entire class on the Thursday preceding the presentation. Everyone is expected to read all of the papers and as much as possible contribute to discussion during the presentation. Grading will be based upon participation in all aspects of the class.

Class is Monday from 1:00-2:30PM.
